Diabetes Medications and Cardiovascular Impact

Diabetes Medications and Cardiovascular Impact Type 2 diabetes is a known risk factor for cardiovascular disease.^{1,2} In addition, the combination of diabetes and cardiovascular disease increases the risk of death.³ When considering glucose-lowering potential, side effects, cost, and outcomes; metformin remains the optimal first-line oral agent in

8. Cardiovascular Disease and Risk Management

For prevention and management of diabetes complications in children and adolescents, please refer to Section 11 “Children and Adolescents.” In all patients with diabetes, cardiovascular risk factors should be

systematically assessed at least annually. These risk factors include dyslipidemia, hypertension, smoking, a family history of premature coronary disease, and the presence of albuminuria.

Cardiovascular risk assessment scores for people with ...

Introduction. Type 2 diabetes is a strong risk factor for cardiovascular disease (CVD), with some studies suggesting that it confers an equivalent risk to having had a myocardial infarction [1, 2]. Multifactorial interventions, such as the Steno-2 study, have been effective in reducing the risk of non-fatal [] and fatal CVD [] among diabetic patients through therapy targeting hyperglycaemia ...

Type 2 diabetes and incidence of cardiovascular diseases ...

Introduction. Patients with type 2 diabetes are at increased risk of cardiovascular diseases and associated clinical complications. 1 Although type 2 diabetes has become an increasingly common disease, estimated to affect 380 million people worldwide by 2025, 2 the incidence of myocardial infarction and stroke has declined rapidly during the past few decades.
