History of Dentistry Timeline

1839. The American Journal of Dental Science, the world's first dental journal, begins publication.; Charles Goodyear invents the vulcanization process for hardening rubber. The resulting Vulcanite, an inexpensive material easily molded to the mouth, makes an excellent base for false teeth, and is soon adopted for use by dentists. In 1864 the molding process for vulcanite dentures is patented ...

Vancouver Dentist Team

Dr. Nematollahi. Dr. Nematollahi is a board certified periodontist and a Fellow of the Royal College of Dentists of Canada. She practices full spectrum of periodontics with special interests in field of implant aesthetics and implant supported full mouth rehabilitations.

Human tooth

Dental anatomy is a field of anatomy dedicated to the study of tooth structure. The development, appearance, and classification of teeth fall within its field of study, though dental occlusion, or contact between teeth, does not. Dental anatomy is also a taxonomic science as it is concerned with the naming of teeth and their structures. This information serves a practical purpose for dentists ...

Tooth polishing

Tooth polishing is done to smooth the surfaces of teeth and restorations. The purpose of polishing is to remove extrinsic stains, remove dental plaque accumulation, increase aesthetics and to reduce corrosion of metallic restorations. Tooth polishing has little therapeutic value and is usually done as a cosmetic procedure after debridement and before fluoride application.

The Team | Gainesville | Atlas Walk Dental & Orthodontics
